

Technical scope and high-level Architecture

- Can be deployed as **Private, Community /Shared or Public** (Default data sharing is NONE)
- Can be deployed using **ANY TECHNOLOGY** to suit use case as long as compliant with standards
- Can be deployed by **ANY VENDOR**

1. We do not compete in this space but all work together. Focus on Infrastructure, Data Platform and some Common Apps services.
2. We do compete in this space: We all will be developing / selecting our own applications.
3. (Commercial) Business services (examples)

Open Footprint™ main characteristics:

1. Data access using public APIs.
2. (Near) Realtime focus.
3. Large user numbers connecting using own apps → OpenID Connect based.
4. Machine to machine focus.
5. Micro Services based.
6. Orchestration services focus.
7. Third party apps via Marketplace.
8. Open Source Driven (LSF)
